YOUTUBE CONTENT ANALYSIS

YouTube Legal IP Competitor Analysis

Historical high-view videos | Lawyer-led and AI-presented channels

Evidence and priorities for three Shorts accounts

27 OCTOBER 2026 / B2C STRATEGY

BUSINESS QUESTION

Which three YouTube accounts should the client test first?

Objective: identify initial content directions for the client's YouTube presence.

Decision to make	Evidence this analysis examines
Which format should we test first?	Compare Shorts and long-form views and engagement.
Which topics merit testing?	Compare categories and check creator concentration.
How should the three accounts differ?	Assess lawyer-led and AI-presented evidence separately.

Output: three pilot directions with evidence and limitations. Persona, voice and opening style remain undecided.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Sample coverage and channel classification

LAWYER-LED

Person presented as a lawyer explaining legal issues or cases.
Basis: stated professional identity and channel/video descriptions.

AI-PRESENTED

AI-generated presenters, voices or characters in legal/police content.
Basis: AI disclosures and channel/video descriptions.

AI-presented describes the delivery method, not whether the content discusses AI.

Analysis group	Channels	Format sample	Topic sample
Lawyer-led	20	1,000	947
AI-presented	9	401	394
Total	29	1,401	1,341

Selection: >=10,000 subscribers; up to 50 highest-view videos per channel among API-enumerated public uploads.

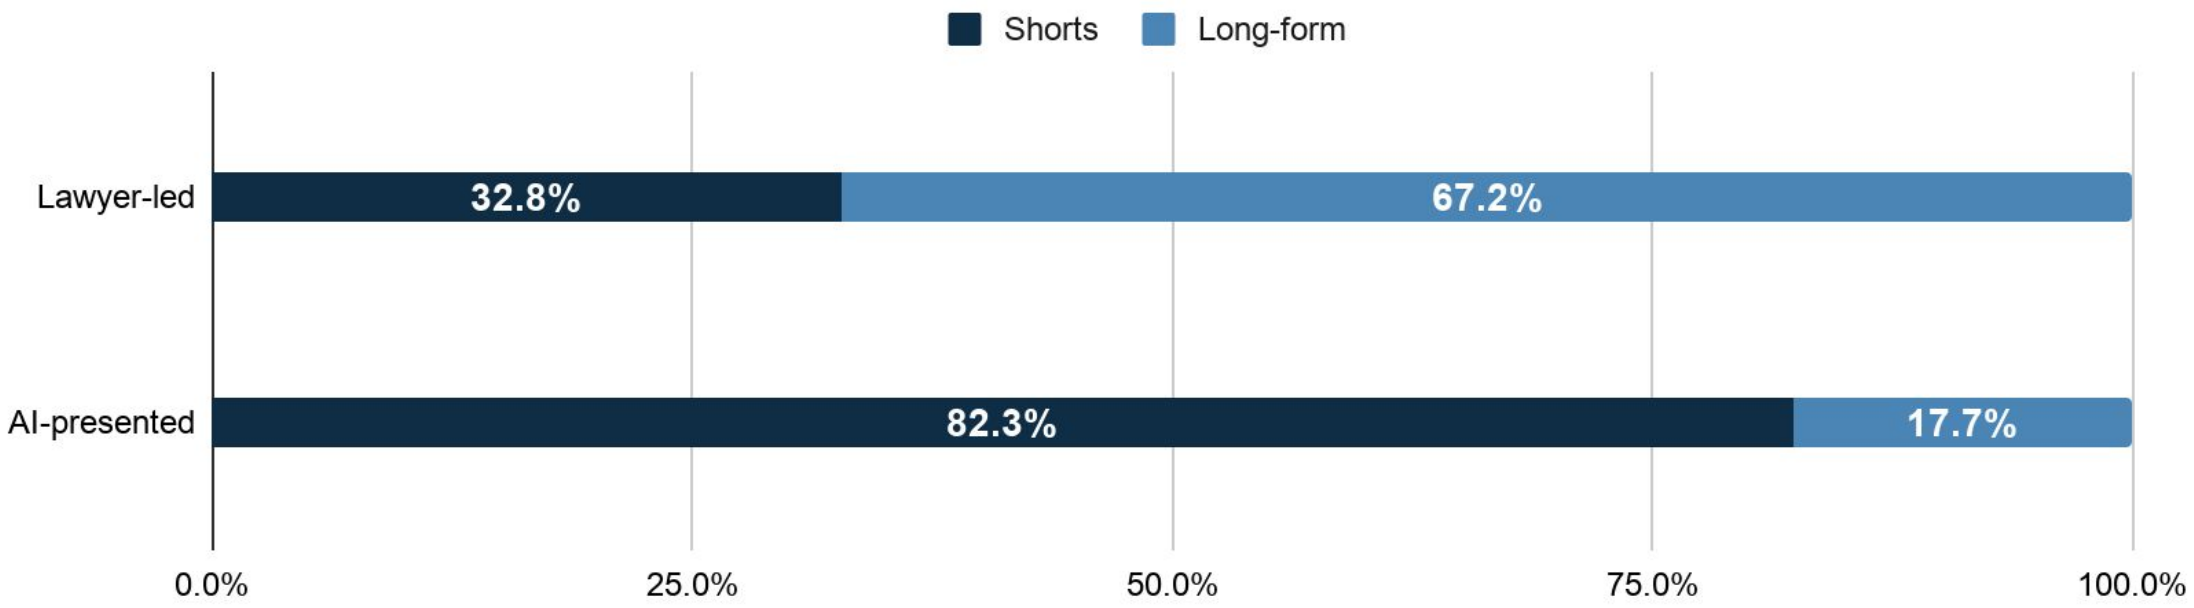

Excluded: one off-topic channel; 43 unclear + 17 non-legal videos from topic analysis. Mixed accounts: too few comparable examples.

Classification limits: available metadata/disclosures only; no independent credential verification or full audiovisual review.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Sample mix: 67% long-form for lawyers; 82% Shorts for AI

Share of videos in the historical high-view sample, not a comparison of format performance.

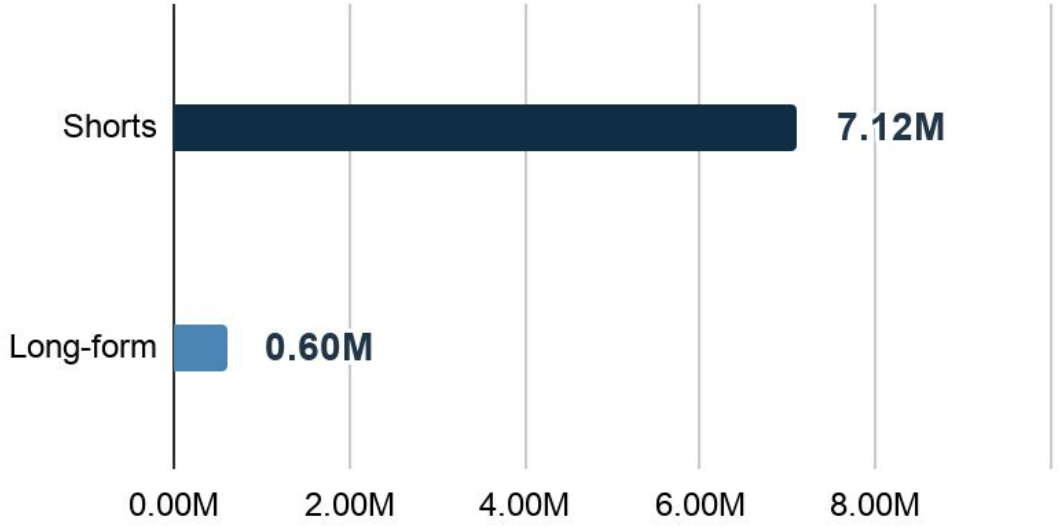

Counts: lawyer-led 328 Shorts / 672 long-form; AI-presented 330 Shorts / 71 long-form.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

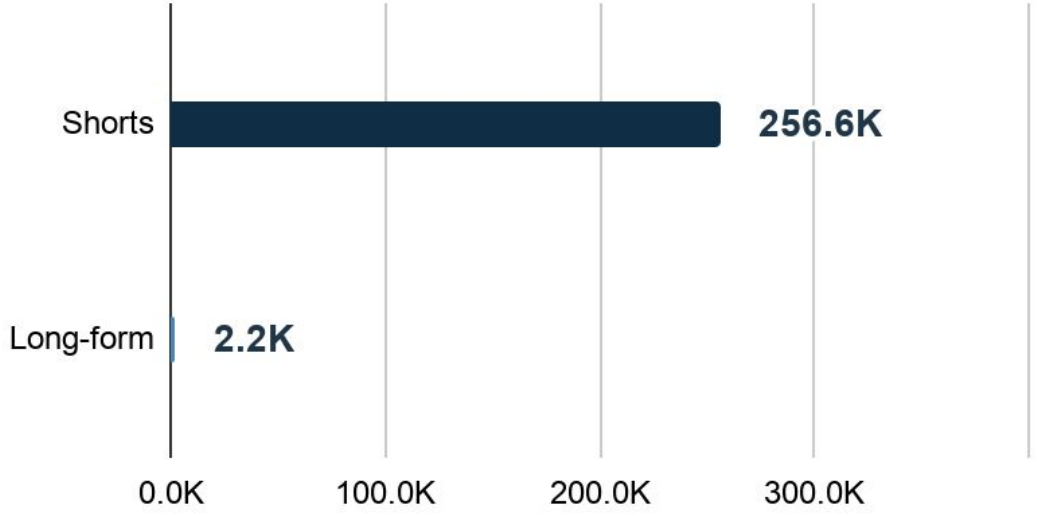

Shorts have higher pooled median views in both groups

Cumulative views per sampled video. Separate chart scales preserve readability.

LAWYER-LED

AI-PRESENTED

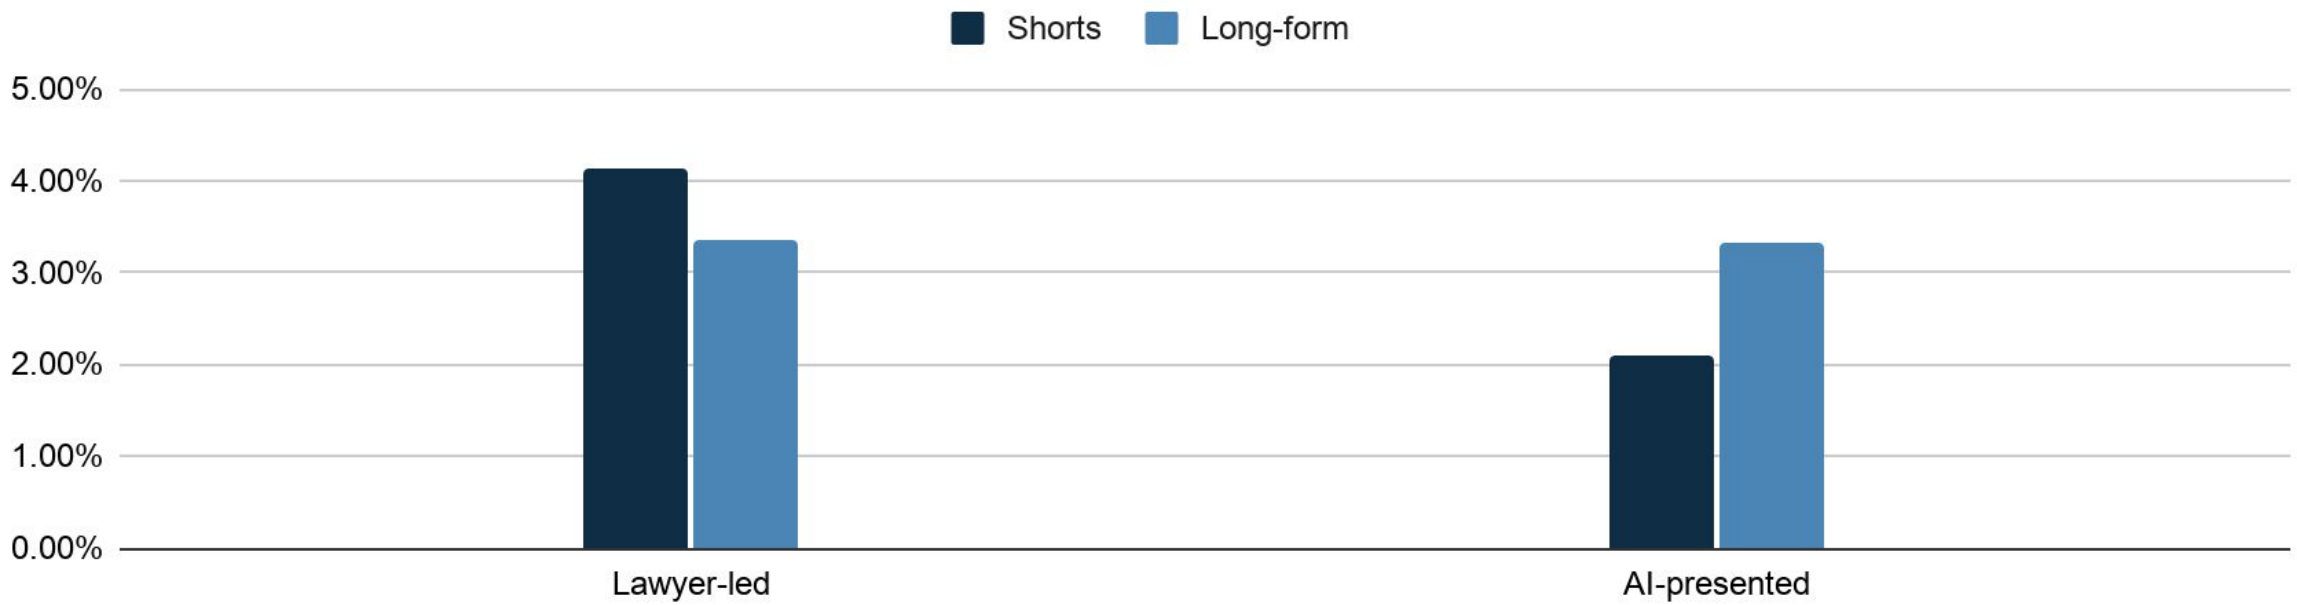

Lawyer-led: 7,115,579 vs 603,002 views. AI-presented: 256,624 vs 2,211 views.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Pooled engagement favors lawyer Shorts; AI evidence is limited

Median per-video engagement rate = (likes + comments) / views; missing interactions are excluded.

Valid ER videos: lawyer-led 324 Shorts / 666 long-form; AI-presented 285 Shorts / 70 long-form.

AI limitation: long-form comes from only 2 channels; only Agente Davis has ≥5 videos per format. Different channel mixes mean these pooled results cannot establish an AI format advantage.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Entertainment leads pooled views among lawyer Shorts

Pooled category medians across sampled lawyer Shorts; channel composition differs by category.

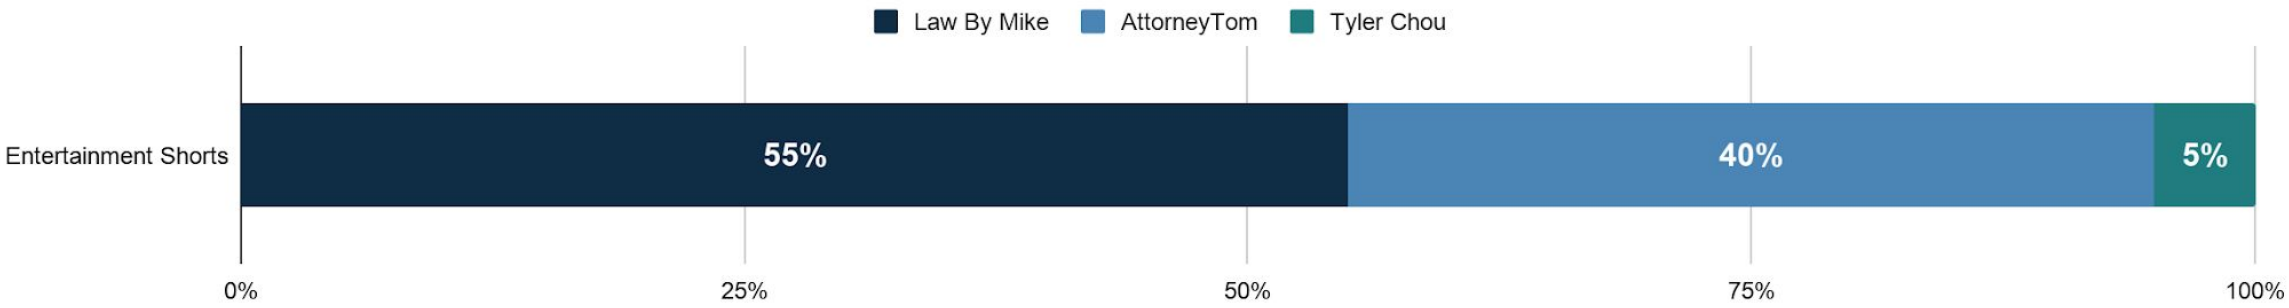

Content category	Videos	Channels	Median views	Median Engagement Rate
Entertainment / reactions	**20**	**3**	**82.70M**	**3.04%**
Legal education	145	8	12.08M	4.17%
Case stories	36	5	4.30M	4.44%
News / commentary	81	8	296.7K	4.11%

Pooled results may reflect channel composition; examine creator concentration before choosing topics.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Law By Mike accounts for 55% of sampled entertainment Shorts

Only 20 videos across three channels support the category's 82.70M pooled median views.

Channel	Videos	Median views	Median Engagement Rate
Law By Mike	11	107.11M	2.35%
AttorneyTom	8	574.3K	4.80%
Tyler Chou	1	9.3K	3.19%

The entertainment result is concentrated in one creator; next, recalculate the medians without Law By Mike.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Education and case stories remain promising without Law By Mike

Sensitivity check: remove Law By Mike from each lawyer Shorts category and recalculate the median.

Content category	All channels median views	Without Mike median views	Remaining videos / channels	Without Mike median engagement rate
Entertainment / reactions	82.70M	446.1K	9 / 2	4.76%
Legal education	**12.08M**	**9.61M**	**116 / 7**	**4.33%**
Case stories	**4.30M**	**4.14M**	**34 / 4**	**4.48%**
News / commentary	296.7K	296.7K	81 / 8	4.11%

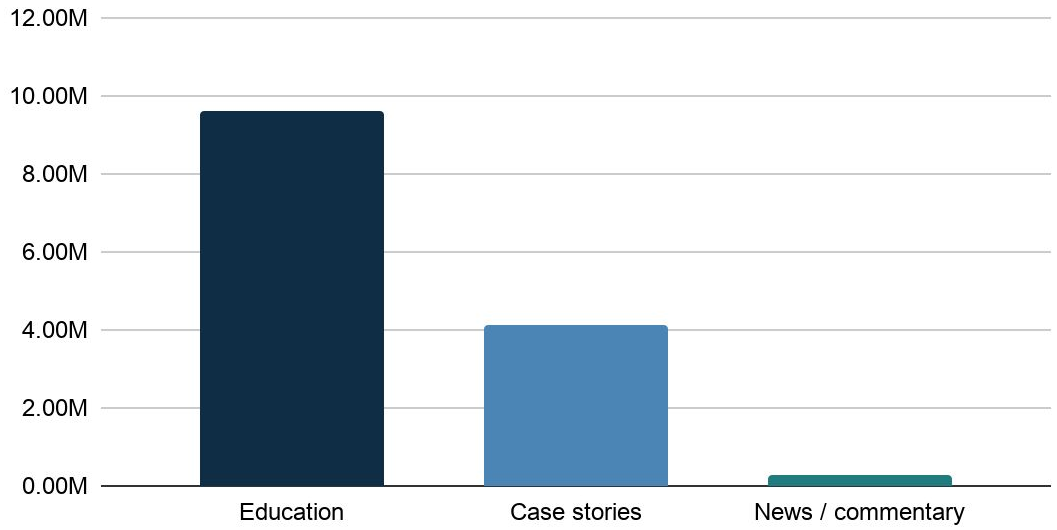

This sensitivity check supports testing education and case stories; other creator differences remain.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

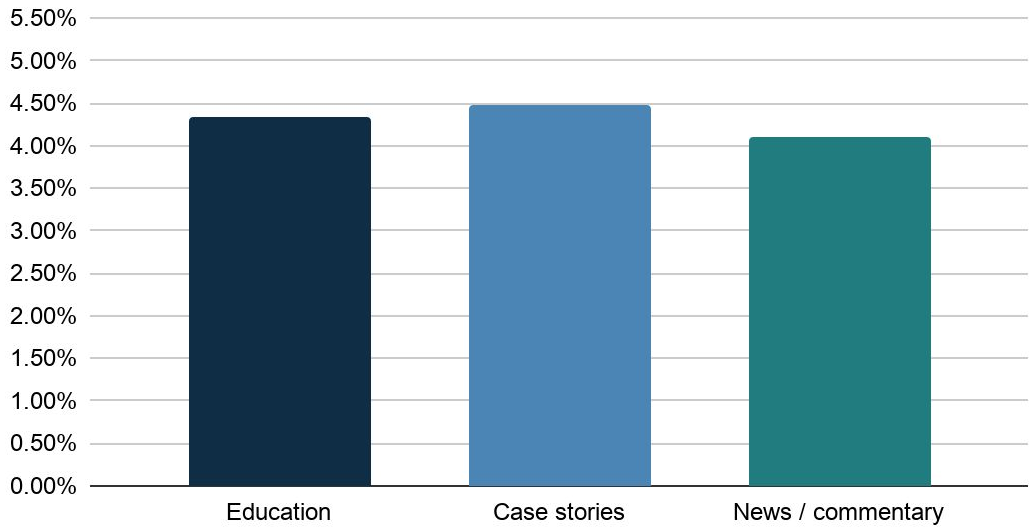

Education and stories combine reach with interaction

Lawyer Shorts excluding Law By Mike. These are descriptive comparisons, with creator differences remaining.

MEDIAN VIEWS

MEDIAN ENGAGEMENT RATE

Education and case stories merit testing; other creator differences remain.
Entertainment remains exploratory: only 9 videos across 2 channels after exclusion.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Treat the findings as pilot evidence, with five limits

Historical hits do not establish topic-specific performance or forecast results for a new account.

Measurement issue	How to interpret the report
Historical high-view selection	Survivorship / selection bias; no estimate of a typical upload or new-account outcome.
Pooled video medians	Pooled medians can reflect channel mix; within-channel results vary. Shorts is a test priority, not a proven superior format.
AI-assisted topic labels	Titles and selected descriptions reviewed; no full-video or transcript verification claimed.
Missing engagement data	51 missing likes; 5 missing comments; 56 ER values excluded from the 1,401-video sample.
Retrieval and scope	API-enumerated public uploads only; upload-count gaps remain. Mixed accounts excluded: only two comparable accounts found.

Definitions: median engagement rate = median[(likes + comments) / views]. Shorts verified using official tab IDs or duration exclusion. Completed live archives are retained in long-form.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Prioritize three Shorts accounts for the initial test

The lawyer-hosted topics have stronger evidence. AI education is exploratory.

Priority account	Content to test	Sample evidence (medians)
1 Lawyer-led Legal education	Explain legal questions and processes.	9.61M views | 4.33% engagement 116 videos / 7 channels; without Mike.
2 Lawyer-led Case stories	Explain legal events through specific cases.	4.14M views | 4.48% engagement 34 videos / 4 channels; without Mike.
3 AI-presented Legal education	Test the education topic using AI presentation.	179.5K views | 1.16% engagement 17 videos / 1 channel; exploratory.

Accounts 1-2: stronger topic evidence. Account 3: exploratory. Defer AI case stories: evidence is mainly fiction. Compare views and engagement at equal video ages; persona and opening style remain undecided.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

Case stories lead median views among lawyer long-form

Long-form remains a candidate for explaining complete cases; the sample does not prove deeper trust or comprehension.

Content category	Videos	Channels	Median views	Median Engagement Rate
Case stories	59	11	1.39M	3.14%
Court / live coverage	64	4	996.2K	2.83%
Entertainment / reactions	14	3	989.6K	4.13%
News / commentary	350	14	583.5K	3.89%
Legal education	178	10	182.8K	2.73%

Case stories: 59 videos across 11 channels; 1.39M median views and 3.14% median engagement rate.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

AI Shorts evidence mainly supports fictional storytelling

AI-presented describes the account's presentation method; it does not mean the videos teach viewers about AI.

Content category	Videos	Channels	Median views	Median Engagement Rate
Fictional legal / police stories	301	8	315.3K	2.16%
Legal education *	17	1	179.5K	1.16%
News / commentary *	4	1	170.5K	1.28%
Case stories *	1	1	2.28M	2.09%

* Fewer than three channels. Case stories have one video; news/commentary has four.

Prioritize AI education as account 3 (exploratory). Defer factual AI case stories: only one labeled video.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.

AI long-form is too concentrated for a broad conclusion

All 71 sampled long-form videos come from Agente Davis (25) and Law Gyaan AI (46).

Content category	Videos	Channels	Median views	Median Engagement Rate
Legal education *	65	2	1.7K	3.25%
News / commentary *	6	1	100.8K	3.51%

* Fewer than three channels. Valid ER videos: education 64; news/commentary 6.

Low views do not make the formula inaccurate. The key limitations are narrow coverage, channel concentration and the absence of a comparable factual-story sample.

Source: YouTube snapshot, 27 Oct 2026; historical high-view sample.
